**Emerging Market Economies and Financial Globalization**-Leonardo E. Stanley 2018-03-15 In the past, foreign shocks arrived to national economies mainly through trade channels, and transmissions of such shocks took time to come into effect. However, after capital globalization, shocks spread to markets almost immediately. Despite the increasing macroeconomic dangers that the situation generated at emerging markets in the South, nobody at the North was ready to acknowledge the pro-cyclicity of the financial system and the inner weakness of “decontrolled” financial innovations because they were enjoying from the “great moderation.” Monetary policy was primarily centered on price stability objectives, without considering the mounting credit and asset price booms being generated by market liquidity and the problems generated by this glut. Mainstream economists, in turn, were not majorly attracted in integrating financial factors in their models. External pressures on emerging market economies (EMEs) were not eliminated after 2008, but even increased as international capital flows augmented in relevance thereafter. Initially economic authorities accurately responded to the challenge, but unconventional monetary policies in the US began to create important spillovers in EMEs. Furthermore, in contrast to a previous surge in liquidity, funds were now transmitted to EMEs throughout the bond market. The perspective of an increase in US interest rates by the FED is generating a reversal of expectations and a sudden flight to quality. Emerging countries’ currencies began to experience higher volatility levels, and depreciation movements against a newly strong US dollar are also increasingly observed. Consequently, there are increasing doubts that the “unexpected” favorable outcome observed in most EMEs at the aftermath of the Global Financial Crisis (GFC) would remain.

**Great Teachers**-Barbara Bruns 2014-10-01 The seven million teachers of Latin America and the Caribbean (LAC) are the critical actors in the region’s efforts to improve education quality and raise student learning levels, which lag far behind those of OECD countries and East Asian countries such as China. This book documents the high economic stakes around teacher quality, benchmarks the current performance of LAC’s teachers, and delineates the key issues. These include low standards for entry into teacher training, poor quality training programs that are detached from the realities of the classroom, unattractive career incentives, and weak support for teachers once they are on the job. New research conducted for this report in close to 15,000 classrooms in seven different LAC countries – the largest cross-country study of this kind to date – provides a first-ever insight into how the region’s teachers perform inside the classroom. It documents that the average teacher in LAC loses the equivalent of one day of instructional time per week because of inadequate preparation, excessive time on administration (taking attendance, passing out papers) and a surprisingly high share of time physically absent from the classrooms where they should be teaching. Teachers also make limited use of available learning materials, especially those using information and communications technology (ICT), and are unable to keep the majority of their students engaged. The book sets out the three priority lines of reform needed to produce great teachers in LAC: policies to recruit better teachers; programs to groom teachers and improve their skills once they are in service; and stronger incentives to motivate teachers to perform their best throughout their career. In every area, the book distills the latest evidence from inside and outside the region to provide practical guidance to policymakers in the design of effective programs and sustainable reforms. A final chapter analyzes the politics of recent major teacher reforms in Chile, Peru, Ecuador and Mexico, chronicling the prominent role of teachers’ unions and the political and communications strategies that have underpinned successful reforms.

**Brazil**-Alfred P. Montero 2014-03-10 Once deemed a “dysfunctional” democracy with a “feckless” set of political institutions and a “drunk” economy, today’s Brazil has undergone a complete reversal of fortune. Now in its third decade of democracy, the economy is blossoming and large-scale development projects are underway, including the exploitation of massive, off-shore oil reserves, a nationwide effort to modernize infrastructure, and preparations for the hosting of the 2014 World Cup and the 2016 Olympics. Inequality and poverty are reducing and even Brazil’s political institutions are more governable and are producing a higher-quality democracy than most observers once thought possible. Alfred P. Montero’s timely and wide-ranging book explores Brazil’s amazing “turnaround” - from improvements to the working of its political institutions and judiciary, to the renewal of economic growth, the advent of innovative social policy, and the emergence of a new foreign policy agenda. Unpacking both overly optimistic as well as pessimistic views of Brazilian politics and development, Montero offers illuminating insights into the country’s transformation and its increasing significance on the international stage.

**Why Forests? Why Now?**-Frances Seymour 2016-12-27 Tropical forests are an undervalued asset in meeting the greatest global challenges of our time—averting climate change and promoting development. Despite their importance, tropical forests and their ecosystems are being destroyed at a high and even increasing rate in most forest-rich countries. The good news is that the science, economics, and politics are aligned to support a major international effort over the next five years to reverse tropical deforestation. Why Forests? Why Now? synthesizes the latest evidence on the importance of tropical forests in a way that is accessible to anyone interested in climate change and development and to readers already familiar with the problem of deforestation. It makes the case to decisionmakers in rich countries that rewarding developing countries for protecting their forests is urgent, affordable, and achievable.

**The Film Industry in Brazil**-Randal Johnson 1987-04-15 Looking back through the prism of the severe economic crisis for filmmaking in the 1980s, The Film Industry in Brazil explores the unusual relationship between the state-supported industry, which often produced politically radical films, and the authoritarian regime that had held sway for twenty years. To ground his analysis, Johnson covers the early years of the film industry, 1898-1930; attempts at industrialization during the 1930s and 1940s; film industry congresses and government film boards, 1950-1966; the National Film Institute, 1966-1975; and the expansion of the state’s role from 1969 through 1980. Well-conceived, carefully researched and documented, Johnson’s study fills a major gap in film studies by tracing the development of this industry in Brazil, focusing specifically on its relationship to the state.

**Energy Harvesting**-Alireza Khaligh 2017-12-19 Also called energy scavenging, energy harvesting captures, stores, and uses "clean" energy sources by employing interfaces, storage devices, and other units. Unlike conventional electric power generation systems, renewable energy harvesting does not use fossil fuels and the generation units can be decentralized, thereby significantly reducing transmission and distribution losses. But advanced technical methods must be developed to increase the efficiency of devices in harvesting energy from environmentally friendly, "green" resources and converting them into electrical energy. Recognizing this need, Energy Harvesting: Solar, Wind, and Ocean Energy Conversion Systems describes various energy harvesting technologies, different topologies, and many types of power electronic interfaces for stand-alone utilization or grid connection of energy harvesting applications. Along with providing all the necessary concepts and theoretical background, the authors develop simulation models throughout the text to build a practical understanding of system analysis and modeling. With a focus on solar energy, the first chapter discusses the I–V characteristics of photovoltaic (PV) systems, PV models and equivalent circuits, sun tracking systems, maximum power point tracking systems, shading effects, and power electronic interfaces for grid-connected and stand-alone PV systems. It also presents sizing criteria for applications and modern solar energy applications, including residential, vehicular, naval, and space applications. The next chapter reviews different types of wind turbines and electrical machines as well as various power electronic interfaces. After explaining the energy generation technologies, optimal operation principles, and possible utilization techniques of ocean tidal energy harvesting, the book explores near- and offshore approaches for harvesting the kinetic and potential energy of ocean waves. It also describes the required absorber, turbine, and generator types, along with the power electronic interfaces for grid connection and commercialized ocean wave energy conversion applications. The final chapter deals with closed, open, and hybrid-cycle ocean thermal energy conversion systems.
