Building Evolutionary Architectures: Support Constant

Summary An evolutionary architecture consists of three primary aspects: incremental change, fitness functions, and appropriate coupling. In the remainder of the book, we discuss each of these factors separately, then combine them to address what it takes to build and maintain architectures that support constant change. 14 |

This book gives a high level overview of building evolutionary architectures. An evolutionary architecture supports guided, incremental change across multiple dimensions. Changes are guided by fitness functions that check if the most important architectural characteristics are on target. Examples vary from coding standards to performance, security.

Building Evolutionary Architectures: Support Constant

One of the keys to building evolutionary architectures lies in determining natural component granularity and coupling between components to fit the capabilities they want to support via the software architecture. In evolutionary architecture, architects deal with architectural quanta, the parts of a system held together by hard-to-break forces.

The timely "Building

Evolutionary Architectures" sits at the intersection of two key trends in the software industry. At one hand software engineers face increasing demand for delivery and quality at 'Internet' pace and scale. The only way to address this is to build evolving architectures. We do not have all the answers at the beginning, nor do we have time to find all the answers.

Building Evolutionary Architectures

An evolutionary architecture supports building systems that allow architects and developers to make sweeping changes to the most important parts of their systems with confidence. It covers practices that allow developers to build continual architectures, which evolve cleanly without the need for a crystal ball. Our Definition:
