basis, you should be aware of the backbone which supports this incredible invention. The truth is: Computers and technology rule the world today and most of us are not aware of the network that is responsible for their efficient operation. A computer network is the interconnection of various devices, responsible for sending or receiving media or data. These devices are known as hosts and are connected using a number of paths. There are also other network devices like, routers, hubs, bridges and switches which are responsible for the communication between two different devices. The layout pattern which is used to interconnect the devices is known as the network topology like star, mesh, bus, ring, daisy chain etc. Local Area Network or LAN is a data connection network which connects various computers or terminals within a building or a small geographical area. Again, WAN stands for Wide Area Network. It is a telecommunications network which expands through a wide geographical area. DOWNLOAD: Computer Networking Beginners Guide, Ultimate Guide to Master Communication System Including Cisco and CCNA, Wireless and Cloud Technology, System Security Administration and IP Subnetting. Computer networks consist of various components, protocols and technologies working together. There should be a perfect guide who will help in learning the basics of how the network works and how the components fit together. The goal of the book is simple: It is the perfect guide for the beginners to know everything about computer network, the devices and the terminologies associated with it, domains, packets frames and headers, cabling management like Ethernet cable, cross cable, ADSL, fibre, full-duplex mode, simple-half duplex mode and lot more. The book also stresses on Ultimate Guide to Master Communication System Including Cisco and CCNA, Wireless and Cloud Technology, System Security Administration and IP Subnetting. You will also learn: Components of a network Networking hardware like firewall, nas etc. Wireless hardware and standards. Cabling Management Everything about IPs. History of the internet. Introduction to various protocols like TCP/UDP/IP Virtualization, server installation, cloud service and principal OS. Basic Cisco and CCNA commands and requirements. Minimum OS command and examples in Windows, MacOS and Linux. Troubleshooting. Would you like to know more?
