ADSI ASP-Steven Hahn 1998-01-01 Almost all commonly available directory services share a common root in the X500 directory services protocol and yet until recently, no one took advantage of that fact and presented the IT world with a way to utilize this fact and create applications which could span across directories on different platforms. With the COM-based Active Directory Service Interfaces however, Microsoft have presented us with a set of programming tools that allows us not only to access any directory service with an ADSI implementation (six at the moment) but also to create programs for that purpose in almost any current programming script or language. ADSI ASP Programmer's Reference takes you through the whole range of ADSI's capabilities teaching you how to build up a complete set of web pages that could allow a system administrator to run a domain almost entirely away from his desk simply by firing up an internet browser. Learn how to create, manipulate and delete users and user groups, print queues, NT services, web applications and mail servers with a simple ASP page. If you're a system administrator and have a basic knowledge of writing web pages, then this book is for you. It's also ideal for peop

Microeconomics-Austan Goolsbee 2019-09-27 Like no other text for the intermediate microeconomics course, Goolsbee, Levitt, and Syverson's Microeconomics bridges the gap between today's theory and practice. A strong empirical dimension tests theory and successfully applies it. With carefully crafted features and vivid examples, Goolsbee, Levitt, and Syverson's text helps answer two critical questions students ask, "Do people and firms really act as theory suggests" and "How can someone use microeconomics in a practical way?" The authors teach in economics departments and business schools and are active empirical microeconomics researchers. Their grounding in different areas of empirical research allows them to present the evidence developed in the last 20 years that has tested and refined the fundamental theories. Their teaching and professional experiences are reflected in an outstanding presentation of theories and applications.
