The main premise of this course is that a better understanding of where the basics come from will lead to better and faster comprehension of more complex ideas. It also helps to remember, however, that music theory is a bit like grammar. Catherine Schmidt-Hones is a music teacher from Champaign, Illinois and she has been a pioneer in open education since 2004. She is currently a doctoral candidate at the University of Illinois in the Open Online Education program with a focus in Curriculum and Instruction.

Based on three years of field study spanning seventeen states, coupled with reflections from the author on her own teaching strategies, *Teaching Music Theory: New Voices and Approaches* highlights teaching approaches with substantial real-life examples from instructors across the country. The main premise of the text focuses on the question of why. Why do we assess in a particular way? Why are our curriculums designed in a certain manner? Why should students master aural skills for their career as a performer, music educator, or music therapist? It is through the experiences shared in

the text that many of these questions of "why" are answered. Along with answering some of the important questions of "why," topics such as classroom environment, undergraduate research and mentoring, assessment, and approaches to curriculum development are emphasized. *Teaching Music Theory: New Voices and Approaches* is written in a conversational tone in order to provide a starting point of dialogue for students, new faculty members, and seasoned educators on any level. It is through the pedagogical trends presented and the continued conversation encouraged by the author that one can begin to have a greater appreciation of outstanding teaching and thus an understanding of our own approaches in the classroom"--

Music and the Child-Natalie Sarrazin 2016-06-14 Children are inherently musical. They respond to music and learn through music. Music expresses children's identity and heritage, teaches them to belong to a culture, and develops their cognitive well-being and inner self worth. As professional instructors, childcare workers, or students looking forward to a career working with children, we should continuously search for ways to tap into children's natural

reservoir of enthusiasm for singing, moving and experimenting with instruments. But how, you might ask? What music is appropriate for the children I'm working with? How can music help inspire a well-rounded child? How do I reach and teach children musically? Most importantly perhaps, how can I incorporate music into a curriculum that marginalizes the arts? This book explores a holistic, artistic, and integrated approach to understanding the developmental connections between music and children. This book guides professionals to work through music, harnessing the processes that underlie music learning, and outlining developmentally appropriate methods to understand the role of music in children's lives through play, games, creativity, and movement. Additionally, the book explores ways of applying music-making to benefit the whole child, i.e., socially, emotionally, physically, cognitively, and linguistically.

We Want to Do More Than Survive-Bettina Love 2019 A path to educational justice for all

students - one that encourages teachers, parents, and their communities to adopt the rebellious spirit and bold and creative methods of abolitionists Educator Bettina Love argues that the U.S educational system is maintained by and profits from the suffering of children of color. Reformers offer survival tactics in the forms of test-taking skills, acronyms, grit labs, and character education which she calls the Education Survival Complex. To dismantle the educational survival complex and to achieve educational freedom--not reform--educators, parents, and community leaders must approach education through the imagination, determination, boldness and urgency of an abolitionist. Drawing on her experiences as a student and teacher, Love highlights young community leaders, artists and activists who are advocating for social change and inclusion. She persuasively argues that educators must teach students about racial violence, oppression, and how to make sustainable change in their communities through radical civic initiatives and movements. She concludes by showing how

Using a cognitive behavior approach, the curriculum's learning activities are designed to help students recognize when they are in different states called "zones," with each of four zones represented by a different color. In the activities, students also learn how to use strategies or tools to stay in a zone or move from one to another. Students

explore calming techniques, cognitive strategies, and sensory supports so they will have a toolbox of methods to use to move between zones. To deepen students' understanding of how to self-regulate, the lessons set out to teach students these skills: how to read others' facial expressions and recognize a broader range of emotions, perspective about how others see and react to their behavior, insight into events that trigger their less regulated states, and when and how to use tools and problem solving skills. The curriculum's learning activities are presented in 18 lessons. To reinforce the concepts being taught, each lesson includes probing questions to discuss and instructions for one or more learning activities. Many lessons offer extension activities and ways to adapt the activity for individual student needs. The curriculum also includes worksheets, other handouts, and visuals to display and share. These can be photocopied from this book or printed from the accompanying CD."--Publisher's website.
