Troubleshooting Cisco IP Telephony-Paul Giralt 2002 In The Implosion of Capitalism world-renowned political economist Samir Amin connects the key events of our times - financial crisis, Eurozone implosion, the emerging BRIC nations and the rise of political Islam - identifying them as symptoms of a profound systemic crisis.In light of these major crises and tensions, Amin updates and modifies the classical definitions of social classes, political parties, social movements and ideology. In doing so he exposes the reality of monopoly capitalism in its contemporary global form.In a bravura conclusion, Amin argues that the current capitalist system is not viable and that implosion is unavoidable. The Implosion of Capitalism makes clear the stark choices facing humanity - and the urgent need for a more humane global order.

Improving Adult Literacy Instruction-National Research Council 2012-04-26 A high level of literacy in both print and digital media is required for negotiating most aspects of 21st-century life, including supporting a family, education, health, civic participation, and competitiveness in the global economy. Yet, more than 90 million U.S. adults lack adequate literacy. Furthermore, only 38 percent of U.S. 12th graders are at or above proficient in reading. Improving Adult Literacy Instruction synthesizes the research on literacy and learning to improve literacy instruction in the United States and to recommend a more systemic approach to research, practice, and policy. The book focuses on individuals ages 16 and older who are not in K-12 education. It identifies factors that affect literacy development in adolescence and adulthood in general, and examines their implications for strengthening literacy instruction for this population. It also discusses technologies for learning that can assist with multiple aspects of teaching, assessment,and accommodations for learning. There is inadequate knowledge about effective instructional practices and a need for better assessment and ongoing monitoring of adult students' proficiencies, weaknesses, instructional environments, and progress, which might guide instructional planning. Improving Adult Literacy Instruction recommends a program of research and innovation to validate, identify the boundaries of, and extend current knowledge to improve instruction for adults and adolescents outside school. The book is a valuable resource for curriculum developers, federal agencies such as the Department of Education, administrators, educators, and funding agencies.

Blown to Bits-Harold Abelson 2008 Every day, billions of photographs, news stories, songs, X-rays, TV shows, phone calls, and emails are being scattered around the world as sequences of zeroes and ones: bits. We can't escape this explosion of digital information and few of us want to-the benefits are too seductive. The technology has enabled unprecedented innovation, collaboration, entertainment, and democratic participation. But the same engineering marvels are shattering centuries-old assumptions about privacy, identity, free expression, and personal control as more and more details of our lives are captured as digital data. Can you control who sees all that personal information about you? Can email be truly confidential, when nothing seems to be private? Shouldn't the Internet be censored the way radio and TV are? is it really a federal crime to download music? When you use Google or Yahoo! to search for something, how do they decide which sites to show you? Do you still have free speech in the digital world? Do you have a voice in shaping government or corporate policies about any of this? Blown to Bits offers provocative answers to these questions and tells intriguing real-life stories. This book is a wake-up call To The human consequences of the digital explosion.

Software Rights-Gerardo Con Daz 2019-10-22 A new perspective on United States software development, seen through the patent battles that shaped our technological landscape This first comprehensive history of software patenting explores how patent law made software development the powerful industry that it is today. Historian Gerardo Con Diaz reveals how patent law has transformed the ways computing firms make, own, and profit from software. He shows that securing patent protection for computer programs has been a central concern among computer developers since the 1950s and traces how patents and copyrights became inseparable from software development in the Internet age. Software patents, he argues, facilitated the emergence of software as a product and a technology, enabled firms to challenge each other's place in the computing industry, and expanded the range of creations for which American intellectual property law provides protection. Powerful market forces, aggressive litigation strategies, and new cultures of computing usage and development transformed software into one of the most controversial technologies ever to encounter the American patent system.

Making Immigrant Rights Real-Els de Graauw 2016-04-05 More than half of the 41 million foreign-born individuals in the United States today are noncitizens, half have difficulty with English, a quarter are undocumented, and many are poor. As a result, most immigrants have few opportunities to make their voices heard in the political process. Nonprofits in many cities have stepped into this gap to promote the integration of disadvantaged immigrants. They have done so despite notable constraints on their political activities, including limits on their lobbying and partisan electioneering, limited organizational resources, and dependence on government funding. Immigrant rights advocates also operate in a national context focused on immigration enforcement rather than immigrant integration. In Making Immigrant Rights Real, Els de Graauw examines how immigrant-serving nonprofits can make impressive policy gains despite these limitations. Drawing on three case studies of immigrant rights policies—language access, labor rights, and municipal ID cards—in San Francisco, de Graauw develops a tripartite model of advocacy strategies that nonprofits have used to propose, enact, and implement immigrant-friendly policies: administrative advocacy, cross-sectoral and cross-organizational collaborations, and strategic issue framing. The inventive development and deployment of these strategies enabled immigrant-serving nonprofits in San Francisco to secure some remarkable new immigrant rights victories, and de Graauw explores how other cities can learn from their experiences.

Herbs and Roots-Tamara Venit Shelton 2019-11-26 An innovative, deeply researched history of Chinese medicine in America and the surprising interplay between Eastern and Western medical practice Chinese medicine has a long history in the United States, with written records dating back to the American colonial period. In this intricately crafted history, Tamara Venit Shelton chronicles the dynamic systems of knowledge, therapies, and materia medica crossing between China and the United States from the eighteenth century to the present. Chinese medicine, she argues, has played an important and often unacknowledged role in both facilitating and undermining the consolidation of medical authority among formally trained biomedical scientists in the United States. Practitioners of Chinese medicine, as racial embodiments of “irregular” medicine, became useful foils for Western physicians struggling to assert their superiority of practice. At the same time, Chinese doctors often embraced and successfully employed Orientalist stereotypes to sell their services to non-Chinese patients skeptical of modern biomedicine. What results is a story of racial constructions, immigration politics, cross-cultural medical history, and the lived experiences of Asian Americans in American history.

A Brief History of Entrepreneurship-Joe Carlen 2016-10-11 A Brief History of Entrepreneurship charts how the pursuit of profit by private individuals has been a prime mover in revolutionizing civilization. Entrepreneurs often butt up against processes, technologies, social conventions, and even laws. So they circumvent, innovate, and violate to obtain what they want. This creative destruction has brought about overland and overseas trade, colonization, and a host of revolutionary technologies—from caffeinated beverages to the personal computer—that have transformed society. Consulting rich archival sources, including some that have never before been translated, Carlen maps the course of human history through nine episodes when entrepreneurship reshaped our world. Highlighting the most colorful characters of each era, he discusses Mesopotamian merchants' creation of the urban market economy; Phoenician merchant-sailors intercontinental trade, which came to connect Africa, Asia, and Europe; Chinese tea traders' invention of paper money; the colonization of the Americas; and the current "flattening" of the world's economic playing field. Yet the pursuit of profit hasn't always moved us forward. From slavery to organized crime, Carlen explores how entrepreneurship can sometimes work at the expense of others. He also discusses the new entrepreneurs who, through the nascent space tourism industry, are leading humanity to a multiplanetary future. By exploring all sides of this legacy, Carlen brings much-needed detail to the role of entrepreneurship in revolutionizing civilization.

Skills of the Unskilled-Jacqueline Hagan 2015-03-17 "Most labor and migration studies classify migrants with limited formal education or credentials as 'unskilled.' Despite the value of their work experiences and the substantial technical and interpersonal skills developed throughout their lives, their labor market contributions are often overlooked and their mobility pathways poorly understood. Skills of the Unskilled reports the findings of a five-year study that draws on binational research including interviews with 320 Mexican migrants and return migrants in North Carolina and Guanajuato, Mexico. The authors uncover their lifelong human capital and identify mobility pathways associated with the acquisition and transfer of skills across the migratory circuit, including reskilling, occupational mobility, job jumping, and entrepreneurship."--Provided by publisher.

Handbook of Education Politics and Policy-Bruce S. Cooper 2014-11-10 This revised edition of the Handbook of Education Politics and Policy presents the latest research and theory on the most important topics within the field of the politics of education. Well-known scholars in the fields of school leadership, politics, policy, law, finance, and educational reform examine the institutional backdrop to our educational system, the political behaviors and cultural influences operating within schools, and the ideological and philosophical positions that frame discussions of educational equity and reform. In its second edition, this comprehensive handbook has been updated to capture recent developments in the politics of education, including Race to the Top and the Common Core State Standards, and to address the changing role politics play in shaping and influencing school policy and reform. Chapter authors also provide suggestions for improving the political behaviors of key educational groups and individuals with the hope that an understanding of political goals, governance processes, and policy outcomes may contribute to ongoing school reform.

Peace Psychology in Asia-Cristina Jayme Montiel 2009-06-04 In recent years, peace psychology has grown from a utopian idea to a means of transforming societies worldwide. Yet at the same time peacebuilding enjoys global appeal, the diversity of nations and regions demands interventions reflecting local cultures and realities. Peace Psychology in Asia shows this process in action, emphasizing concepts and methods diverging from those common to the US and Europe. Using examples from China, India, Indonesia, the Philippines, and elsewhere in the region, chapter authors illuminate the complex social, political, and religious conditions that have fostered war, colonialism, dictatorships, and ethnic strife, and the equally intricate personal and collective psychologies that need to be developed to encourage reconciliation, forgiveness, justice, and community. Peace Psychology in Asia: Integrates psychology, history, political science, and local culture into concepts of peace and reconciliation. Highlights the indigenous aspects of peace psychology. Explains the critical relevance of local culture and history in peace work. Blends innovative theoretical material with empirical evidence supporting peace interventions. Balances its coverage among local, national, regional, and global contexts. Analyzes the potential of Asia as a model for world peace. As practice-driven as it is intellectually stimulating, Peace Psychology in Asia is vital reading for social and community psychologists, policy analysts, and researchers in psychology and sociology and international studies, including those looking to the region for ideas on peace work in non-Western countries.

Hybrid Learning and Education-Fu Lee Wang 2010-03-24 The Second International Conference on Hybrid Learning was organized by the School of Continuing and Professional Studies of The Chinese University of Hong Kong and University of Macau in August 2009. ICHL 2009 was an inventive experience for the Hong Kong and Macau tertiary higher education. The conference aims to provide a good platform for knowledge exchange on hybrid learning by focusing on student centered education. The technique is to supplement traditional classroom learning with eLearning. The slogan is “Education leads eLearning,” not vice versa. The me- odology is that at least 30% of learning activities are done by eLearning. The outcome is for students to learn at any time at any place. eLearning can increase students’ lea- ing productivity and reduce teachers’ administration workload alike. It is a new culture for students, teachers and school administrators to adopt in the twenty-first century. The conference obtained sponsorship from Pei Hua Education Foundation Limited, City University of Hong Kong, ACM Hong Kong Section, and Hong Kong Computer Society. Hybrid learning originated from North America in 2000, and is an ongoing trend. It is not merely a simple combination of direct teaching and eLearning. It encompasses different learning strategies and important elements for teaching and learning. It - phasizes outcome-based teaching and learning, and provides an environment for knowledge learning. Students are given more opportunities to be active learners and practice practical skills such as communication, collaboration, critical thinking, cr- tivity, self-management, self-study, problem solving, analysis and numeracy.

Programming and Automating Cisco Networks-Ryan Tischer 2016-06-03 Traditional approaches to network management can't handle soaring network complexity. In the future, the best way to stay in control of your networks will be to program and automate them. Programming and Automating Cisco Networks introduces powerful new Cisco technologies for doing just that. CCIEs Ryan Tischer and Jason Gooley begin by showing how network automation and programmability can bridge gaps in network management arising from modern operational models. Next, they introduce software development tools, use cases, and examples for programming the Nexus 9000 and other Cisco data center network platforms. You'll find detailed coverage of programmability for Cisco campus and WAN products, including the use of NetConf/Yang, Confd, and Cisco SDN controller for managing complex WAN environments. Tischer and Gooley then introduce Cisco's self-service catalog, Prime Services, and techniques for orchestrating multiple automation solutions to deliver applications, using Cisco Process Orchestrator. They conclude with links and references for extending your network automation skills via online communities and open source projects.

Conrad's Last Campaign-Leo Frankowski 2014-02-10 This the last work of Leo Frankowski and the last chapter of the Adventures of Conrad Stargard. It completes a series begun in 1986 and spanning eight books. The series ends in the best of Leo's tradition of rousing adventure intermixed with the engineering details that fleshed out his earlier work. When Leo returned from Russia in 2006, he began working on the final chapter of Conrad's life. His age and declining health made progress slow, but he was eventually able to complete the plot outline and write part of the final book. Leo and I had agreed that Conrad would grow and change in the last book and find a way to noble retirement or noble death. You will have to read the last chapter to know which path was chosen. Unfortunately, Leo died before finishing the text. On Christmas Morning 2008, he died suddenly and peacefully from the effects of various drugs that he was prescribed. However, the book was well started and the plot known and Leo wanted everyone to know what happened to Conrad. I was familiar with Leo's writing style, having been coached by him to enable me to contribute to earlier writings, so I finished it.

Educating Everybody's Children-Robert W. Cole W. Cole 2008-06-15 Designed to promote reflection, discussion, and action among the entire learning community, Educating Everybody's Children encapsulates what research has revealed about successfully addressing the needs of students from economically, ethnically, culturally, and linguistically diverse groups and identifies a wide range of effective principles and instructional strategies. Although good teaching works well with all students, educators must develop an extensive repertoire of instructional tools to meet the varying needs of students from diverse backgrounds. Those tools and the knowledge base behind them are the foundation of this expanded and revised second edition of Educating Everybody's Children. Each strategy discussed in the book includes classroom examples and a list of the research studies that support it. The most important thing we have learned as a result of the education reform movement is that student achievement stands or falls on the motivation and skills of teachers. We must ensure that all teachers are capable of delivering a standards-based curriculum that describes what students should know and be able to do, and that these standards are delivered by means of a rich and engaging "pedagogy of plenty." By these two acts we can ensure that all schools will be ready and able to educate everybody's children.
