a comprehensive revamping of the MCSE (Microsoft Certified System Engineer) track with all new core exams and all new electives. In addition, the MCSA (Microsoft Certified System Administrator) certification will expand its program to include an additional upgrade exam for MCSAs wanting to become MCSEs. The launch of this new certification track means that all current MCSEs, representing an installed base of approximately 200,000 (source: MCP Magazine) will need to recertify under Windows Server 2003. In addition, any MCP looking to become an MCSE--estimates are about 1.2 million (source: MCP Magazine)--will also have to continue their certifications under the new program. Many industry experts expect the Windows 2003 certification, and product line as well, to be a more popular track since many organizations are still using NT and plan to skip 2000 and go directly to 2003. * DVD Provides a "Virtual Classroom": Get the benefits of instructor led training at a fraction of the cost and hassle. * Guaranteed Coverage of All Exam Objectives: If the topic is listed in Microsoft's Exam 70-290 objectives, it is covered here. * Fully Integrated Learning: This system includes a study guide, DVD training and Web-based practice exams.

Ecclesiastes and the Wisdom of Solomon-Richard Green Moulton 1903

Measure of Emptiness-Frank Gohlke 1992 "In the United States there is more space where nobody is than where anybody is", said Gertude Stein. From the Midway area of Minneapolis to the prairie grasslands of Kansas, the American landscape is characterized by this spaciousness--and by the presence of windowless, rumbling, enormous grain elevators, rising above the steeples of churches to announce the presence of a town and to explain, in great measure, the function of its inhabitants. Why did their builders choose that particular form to fulfill a practical necessity? And how does the experience of great emptiness shape what people think, feel, and do? Frank Gohlke, one of America's foremost photographers of landscape, has pondered and documented the relationship between these enormous structures and the emptiness of the surrounding landscape for the past two decades. The result is this evocative sequence of images, beginning with Gohlke's earliest formal studies of structural fragments and their mechanisms, and gradually expanding to depict the grain elevator as a part of the landscape. His camera eventually retreats so far that the grain elevator disappears in the horizon, and only the landscape--the "space where nobody is"--is visible. Introducing the photographs is a personal essay by Gohlke on the relationship between people and their space, and the ways in which that relationship actually creates a landscape. A concluding historical essay by John C. Hudson details the development and function of the grain elevator and its geographical and economic role in American life.
