## **PL/SQL Collections and Records - Oracle PL/SQL Tutorial**

28/12/2020 · The %ROWTYPE attribute lets you declare a PL/SQL record that represents a row in a database table, without listing all the columns. Your code keeps working even after columns are added to the table. If you want to represent a subset of columns in a table, or columns from different tables, you can define a view or declare a cursor to select the right columns and do any necessary joins, and then
