Georgia Odyssey-James C. Cobb 2010-01-25 Georgia Odyssey is a lively survey of the state's history, from its beginnings as a European colony to its current standing as an international business mecca, from the self-imposed isolation of its Jim Crow era to its role as host of the centennial Olympic Games and beyond, from its long reign as the linchpin state of the Democratic Solid South to its current dominance by the Republican Party. This new edition incorporates current trends that have placed Georgia among the country's most dynamic and attractive states, fueled the growth of its Hispanic and Asian American populations, and otherwise dramatically altered its demographic, economic, social, and cultural appearance and persona. "The constantly shifting cultural landscape of contemporary Georgia," writes James C. Cobb, "presents a jumbled panorama of anachronism, contradiction, contrast, and peculiarity." A Georgia native, Cobb delights in debunking familiar myths about his state as he brings its past to life and makes it relevant to today. Not all of that past is pleasant to recall, Cobb notes. Moreover, not all of today's Georgians are as unequivocal as the tobacco farmer who informed a visiting journalist in 1938 that "we Georgians are Georgian as hell." That said, a great many Georgians, both natives and new arrivals, care deeply about the state's identity and consider it integral to their own. Georgia Odyssey is the ideal introduction to our past and a unique and often provocative look at the interaction of that past with our present and future.

Virus Taxonomy-Andrew M.Q. King 2011 The practical need to partition the world of viruses into distinguishable, universally agreed upon entities is the ultimate justification for developing a virus classification system. Since 1971, the International Committee on Taxonomy of Viruses (ICTV) operating on behalf of the world community of virologists has taken on the task of developing a single, universal taxonomic scheme for all viruses infecting animals (vertebrate, invertebrates, and protozoa), plants (higher plants and algae), fungi, bacteria, and archaea. The current report builds on the accumulated taxonomic construction of the eight previous reports dating back to 1971 and records the proceedings of the Committee since publication of the last report in 2005. Representing the work of more than 500 virologists worldwide, this report is the authoritative reference for virus
