Airborne Wind Energy-Roland Schmehl 2018-03-31 This book provides in-depth coverage of the latest research and development activities concerning innovative wind energy technologies intended to replace fossil fuels on an economical basis. A characteristic feature of the various conversion concepts discussed is the use of tethered flying devices to substantially reduce the material consumption per installed unit and to access wind energy at higher altitudes, where the wind is more consistent. The introductory chapter describes the emergence and economic dimension of airborne wind energy. Focusing on "Fundamentals, Modeling & Simulation", Part I includes six contributions that describe quasi-steady as well as dynamic models and simulations of airborne wind energy systems or individual components. Shifting the spotlight to "Control, Optimization & Flight State Measurement", Part II combines one chapter on measurement techniques with five chapters on control of kite and ground stations, and two chapters on optimization. Part III on "Concept Design & Analysis" includes three chapters that present and analyze novel harvesting concepts as well as two chapters on system component design. Part IV, which centers on "Implemented Concepts", presents five chapters on established system concepts and one chapter about a subsystem for automatic launching and landing of kites. In closing, Part V focuses with four chapters on "Technology Deployment" related to market and financing strategies, as well as on regulation and the environment. The book builds on the success of the first volume "Airborne Wind Energy" (Springer, 2013), and offers a self-contained reference guide for researchers, scientists, professionals and students. The respective chapters were contributed by a broad variety of authors: academics, practicing engineers and inventors, all of whom are experts in their respective fields.

25 Kites That Fly-Leslie L. Hunt 2008-10 PREFACE Some time ago, I was called on to instruct a number of young women in kitemaking, who, in turn, were to act as instructors in summer church schools. This book has been the outgrowth of my lecture-demonstrations. There are many excellent magazine articles and a few good books on kitemaking but the articles are, for the most part, hard to find except in the larger libraries, and the books call for materials not likely to be had outside of manual-training supply houses or large lumber yards. Since only the commonest materials are required in making the kites herein described, it is felt that this book is not duplicating the efforts of others. It is hoped that this effort will find favor with the teachers in public and special schools, with playground instructors, and in particular with the boys and girls themselves...

Into the Wind-Hans Silvester 2008-06 For thousands of years, kites have allowed human beings to possess the sky. Unable to fly but haunted by the dreams of Icarus, people throughout the world have used their imagination to design these fragile but brilliant objects. Whether they resemble fish, dragons, birds, mythical animals or just bits of colored paper, kites have given wings to the people that hold their strings, giving them a sensation of freedom. Over the course of his many trips, Hans Silvester photographed the flight of these great imaginary birds. From China to Bolivia, Italy to Sri Lanka, each of his images catches the beauty and grace of these objects, which belong to the world of children and adults alike.

Kite Flying-Grace Lin 2004 A girl describes how her family makes and flies a kite.
