The Atlas of AI-Kate Crawford 2021-04-06 The hidden costs of artificial intelligence, from natural resources and labor to privacy and freedom What happens when artificial intelligence saturates political life and depletes the planet? How is AI shaping our understanding of ourselves and our societies? In this book Kate Crawford reveals how this planetary network is fueling a shift toward undemocratic governance and increased inequality. Drawing on more than a decade of research, award-winning science, and technology, Crawford reveals how AI is a technology of extraction: from the energy and minerals needed to build and sustain its infrastructure, to the exploited workers behind "automated" services, to the data AI collects from us.

Rather than taking a narrow focus on code and algorithms, Crawford offers us a political and a material perspective on what it takes to make artificial intelligence and where it goes wrong. While technical systems present a veneer of objectivity, they are always systems of power. This is an urgent account of what is at stake as technology companies use artificial intelligence to reshape the world.

The Times Atlas of World History-Geoffrey Barraclough 1978

An Atlas of Extinct Countries-Gideon Defoe 2021-07-20 Prisoners of Geography meets Bill Bryson: a funny, fascinating, beautifully illustrated - and timely - history of countries that, for myriad and often ludicrous reasons, no longer exist. "Countries are just daft stories we tell each other. They're all equally implausible once you get up close." Countries die. Sometimes it's murder, sometimes it's by accident, and sometimes it's because they were so ludicrous they didn't deserve to exist in the first place. Occasionally they explode violently. A few slip away almost unnoticed. Often the cause of death is either 'got too greedy' or 'Napoleon turned up'. Now and then they just hold a referendum and vote themselves out of existence. This is an atlas of 48 nations that fell off the map. The polite way of writing an obituary is: dwell on the good bits, gloss over the embarrassing stuff. This book refuses to do so, because these dead nations are so full of schemers, racists, and con men that it's impossible to skip the embarrassing stuff. Because of this - and because treating nation-states with too much reverence is the entire problem with pretty much everything - these accounts are not concerned with adding to the earnest flag saluting in the world, however nice some of the flags might be.

Bunker-Bradley Garrett 2020-08-04 A thought-provoking, chilling, and eerily prescient look at “prepper” communities around the world that are building bunkers against a possible apocalypse. Currently, 3.7 million Americans call themselves preppers. Millions more prep without knowing it. Bradley Garrett, who began writing this book years before the 2020 Covid-19 pandemic, argues that prepping is a rational response to global, social, and political systems that are failing to produce credible narratives of continued stability. Left with a sense of foreboding fueled by disease outbreaks, increasing government dysfunctionality, eroding critical infrastructure, nuclear brinkmanship, and an accelerating climate crisis, people all over the world are responding predictably—by hunkering down. For this book, Garrett traveled across four continents to meet those who are constructing panic rooms, building underground backyard survival chambers, stockpiling supplies, preparing go bags, hiding inflatable rafts, rigging mobile “bugout” vehicles, and burrowing deep into the earth. He has returned with a brilliant, original and never less than deeply disturbing story from the frontlines of the way we live now: an illuminating reflection on our age of disquiet and dread that brings our times into new and sharper focus. The “bunker,” Garrett shows, is all around us: in malls, airports, gated communities, the vehicles we drive. Most of all, he reveals, it’s in our minds.

A History of the Second World War in 100 Maps-Jeremy Black 2020-11-18 The First World War was marked by an exceptional expansion in the use and production of military cartography. But World War II took things even further, employing maps, charts, reconnaissance, and the

systematic recording and processing of geographical and topographical information on an unprecedented scale. As Jeremy Black—one of the world's leading military and cartographic historians—convincingly shows in this lavish full-color book, it is impossible to understand the events and outcomes of the Second World War without deep reference to mapping at all levels. In World War II, maps themselves became the weapons. A History of the Second World War in 100 Maps traces how military cartography developed from simply recording and reflecting history to having a decisive impact on events of a global scale. Drawing on one hundred key maps from the unparalleled collections of the British Library and other sources—many of which have never been published in book form before—Jeremy Black takes us from the prewar mapping programs undertaken by both Germany and the United Kingdom in the mid-1930s through the conflict's end a decade later. Black shows how the development of maps led directly to the planning of the complex and fluid maneuvers that defined the European theater in World War II: for example, aerial reconnaissance photography allowed for the charting of beach gradients and ocean depths in the runup to the D-Day landings, and the subsequent troop movements at Normandy would have been impossible without the help of situation maps and photos. In the course of the conflict, both in Europe and the Pacific, the realities of climate, terrain, and logistics—recorded on maps—overcame the Axis powers. Maps also became propaganda tools as the pages of Time outlined the directions of the campaigns and the Allies dropped maps from their aircraft. In this thrilling and unique book, Jeremy Black blends his singular cartographic and military expertise into a captivating overview of World War II from the air, sea, and sky, making clear how fundamental maps were to every aspect of this unforgettable global conflict.

Antarctic Atlas-Peter Fretwell 2020-11-26 One of the least-known places on the planet, the only continent on earth with no indigenous population, Antarctica is a world apart. From a leading cartographer with the British Antarctic Survey, this new collection of maps and data reveals Antarctica as we have never seen it before. This is not just a book of traditional maps. It measures everything from the thickness of ice beneath our feet to the direction of ice flows. It maps volcanic lakes, mountain ranges the size of the Alps and gorges longer than the Grand Canyon, all hidden beneath the ice. It shows us how air bubbles trapped in ice tell us what the earth's atmosphere was like 750,000 years ago, proving the effects of greenhouse gases. Colonies of emperor penguins abound around the coastline, and the journeys of individual seals around the continent and down to the sea bed in search of food have been intricately tracked and mapped. Twenty-nine nations have research stations in Antarctica and their unique architecture is laid out here, along with the challenges of surviving in Antarctica's sunforgiving environment. Antarctica is also the frontier of our fight against climate change. If its ice melts, it will swamp almost every coastal city in the world. Antarctic Atlas illustrates the harsh beauty and magic of this mysterious continent, and shows how, far from being abstract, it has direct relevance to us all.
