Bourgeois Hinduism, or Faith of the Modern Vedantists-Brian Hatcher 2007-11-26 In 1839 a diverse group of Hindu leaders began gathering in Calcutta to share and propagate their faith in a non-idolatrous form of worship. The group, known as the Tattvabodhini Sabha, met weekly to worship and hear discourses from members on the virtues of a rational and morally responsible mode of worship. They called upon ancient sources of Hindu spirituality to guide them in developing a form of modern theism they referred to as "Vedanta." In this book, Brian Hatcher translates these hitherto unknown discourses and situates them against the backdrop of religious and social change in early colonial Calcutta. Apart from bringing to light the theology and moral vision of an association that was to have a profound influence on religious and intellectual life in nineteenth-century Bengal, Hatcher's analysis promotes reflection on a variety of topics central to understanding the development of modern forms of Hindu belief and practice.

Hindu Nationalism in India and the Politics of Fear-D. Anand 2016-04-30 The representation of the Muslims as threatening to India's body politic is central to the Hindu nationalist project of organizing a political movement and normalizing anti-minority violence. Adopting a critical ethnographic approach, this book identifies the poetics and politics of fear and violence engendered within Hindu nationalism.

Dreaming in the World's Religions-Kelly Bulkeley 2008-07-19 Passing for what you are not—whether it is mulattos passing as white, Jews passing as Christian, or drag queens passing as women—can be a method of protection or self-defense. But it can also be a uniquely pleasurable experience, one that trades on the erotics of secrecy and revelation. It is precisely passing's radical playfulness, the way it asks us to reconsider our assumptions and forces our most cherished fantasies of identity to self-destruct, that is centrally addressed in *Passing: Identity and Interpretation in Sexuality, Race, and Religion*. Identity in Western culture is largely structured around visibility, whether in the service of science (Victorian physiognomy), psychoanalysis (Lacan's mirror stage), or philosophy (the Panopticon). As such, it is charged with anxieties regarding classification and social demarcation. Passing wreaks havoc with accepted systems of social recognition and cultural intelligibility, blurring the carefully-marked lines of race, gender, and class. Bringing together theories of passing across a host of disciplines—from critical race theory and lesbian and gay studies, to literary theory and religious studies—*Passing* complicates our current understanding of the visual and categories of identity. Contributors: Michael Bronski, Karen McCarthy Brown, Bradley Epps, Judith Halberstam, Peter Hitchcock, Daniel Itzkovitz, Patrick O'Malley, Miriam Peskowitz, Maria C. Sánchez Linda Schlossberg, and Sharon Ullman.

No Sense of Obligation-Matt Young 2001-11-01 Some of the Praise for No Sense of Obligation . . . fascinating analysis of religious belief -- Steve Allen, author, composer, entertainer [A] tour de force of science and religion, reason and faith, denoting in clear and unmistakable language and rhetoric what science really reveals about the cosmos, the world, and ourselves. Michael Shermer, Publisher, Sceptic Magazine; Author, How We Believe: The Search for God in an Age of Science About the Book Rejecting belief without evidence, a scientist searches the scientific, theological, and philosophical literature for a sign from God--and finds him to be an allegory. This remarkable book, written in the layperson's language, leaves no room for unproven ideas and instead seeks hard evidence for the existence of God. The author, a sympathetic critic and observer of religion, finds instead a physical universe that exists reasonlessly. He attributes good and evil to biology, not to God. In place of theism, the author gives us the knowledge that the universe is intelligible and that we are grownups, responsible for ourselves. He finds salvation in the here and now, and no ultimate purpose in life, except as we define it.

The Rise of China and India in Africa-Fantu Cheru 2010-03-11 In recent years, China and India have become

the most important economic partners of Africa and their footprints are growing by leaps and bounds, transforming Africa's international relations in a dramatic way. Although the overall impact of China and India's engagement in Africa has been positive in the short-term, partly as a result of higher returns from commodity exports fuelled by excessive demands from both countries, little research exists on the actual impact of China and India's growing involvement on Africa's economic transformation. This book examines in detail the opportunities and challenges posed by the increasing presence of China and India in Africa, and proposes critical interventions that African governments must undertake in order to negotiate with China and India from a stronger and more informed platform.

Why Evolution is True-Jerry A. Coyne 2010-01-14 For all the discussion in the media about creationism and 'Intelligent Design', virtually nothing has been said about the evidence in question - the evidence for evolution by natural selection. Yet, as this succinct and important book shows, that evidence is vast, varied, and magnificent, and drawn from many disparate fields of science. The very latest research is uncovering a stream of evidence revealing evolution in action - from the actual observation of a species splitting into two, to new fossil discoveries, to the deciphering of the evidence stored in our genome. Why Evolution is True weaves together the many threads of modern work in genetics, palaeontology, geology, molecular biology, anatomy, and development to demonstrate the 'indelible stamp' of the processes first proposed by Darwin. It is a crisp, lucid, and accessible statement that will leave no one with an open mind in any doubt about the truth of evolution.

The Being of Analogy-Noah Roderick 2020-10-09 Similarity has long been excluded from reality in both the analytical and continental traditions. Because it exists in the aesthetic realm, and because aesthetics is thought to be divorced from objective reality, similarity has been confined to the prison of the subject. In *The Being of Analogy*, Noah Roderick unleashes similarity onto the world of objects. Inspired by object-oriented theories of causality, Roderick argues that similarity is ever present at the birth of new objects. This includes the emergent similarity of new mental objects, such as categories—a phenomenon we recognize as analogy. Analogy, Roderick contends, is at the very heart of cognition and communication, and it is through analogy that we can begin dismantling the impossible wall between knowing and being. The Blind Spot-William Byers 2011-03-28 In today's unpredictable and chaotic world, we look to science to provide certainty and answers--and often blame it when things go wrong. The Blind Spot reveals why our faith in scientific certainty is a dangerous illusion, and how only by embracing science's inherent ambiguities and paradoxes can we truly appreciate its beauty and harness its potential. Crackling with insights into our most perplexing contemporary dilemmas, from climate change to the global financial meltdown, this book challenges our most sacredly held beliefs about science, technology, and progress. At the same time, it shows how the secret to better science can be found where we least expect it--in the uncertain, the ambiguous, and the inevitably unpredictable. William Byers explains why the subjective element in scientific inquiry is in fact what makes it so dynamic, and deftly balances the need for certainty and rigor in science with the equally important need for creativity, freedom, and downright wonder. Drawing on an array of fascinating examples--from Wall Street's overreliance on algorithms to provide certainty in uncertain markets, to undecidable problems in mathematics and computer science, to Georg Cantor's paradoxical but true assertion about infinity--Byers demonstrates how we can and must learn from the existence of blind spots in our scientific and mathematical understanding. The Blind Spot offers an entirely new way of thinking about science, one that highlights its strengths and limitations, its unrealized promise, and, above all, its unavoidable ambiguity. It also points to a more sophisticated approach to the most intractable problems of our time.

Wholeness and the Implicate Order-David Bohm 2005-07-12 David Bohm was one of the foremost scientific thinkers and philosophers of our time. Although deeply influenced by Einstein, he was also, more unusually for a scientist, inspired by mysticism. Indeed, in the 1970s and 1980s he made contact with both J. Krishnamurti and the Dalai Lama whose teachings helped shape his work. In both science and philosophy, Bohm's main concern was with understanding the nature of reality in general and of consciousness in particular. In this classic work he develops a theory of quantum physics which treats the totality of existence as an unbroken whole. Writing clearly and without technical jargon, he makes complex ideas accessible to anyone interested in the nature of reality.

Defining Neighbors-Jonathan Marc Gribetz 2016-10-11 How religion and race—not nationalism—shaped early encounters between Zionists and Arabs in Palestine As the Israeli-Palestinian conflict persists, aspiring

peacemakers continue to search for the precise territorial dividing line that will satisfy both Israeli and Palestinian nationalist demands. The prevailing view assumes that this struggle is nothing more than a dispute over real estate. *Defining Neighbors* boldly challenges this view, shedding new light on how Zionists and Arabs understood each other in the earliest years of Zionist settlement in Palestine and suggesting that the current singular focus on boundaries misses key elements of the conflict. Drawing on archival documents as well as newspapers and other print media from the final decades of Ottoman rule, Jonathan Gribetz argues that Zionists and Arabs in pre-World War I Palestine and the broader Middle East did not think of one another or interpret each other's actions primarily in terms of territory or nationalism. Rather, they tended to view their neighbors in religious terms—as Jews, Christians, or Muslims—or as members of "scientifically" defined races—Jewish, Arab, Semitic, or otherwise. Gribetz shows how these communities perceived one another, not as strangers vying for possession of a land that each regarded as exclusively their own, but rather as deeply familiar, if at times mythologized or distorted, others. Overturning conventional wisdom about the origins of the Israeli-Palestinian conflict, Gribetz demonstrates how the seemingly intractable nationalist contest in Israel and Palestine was, at its start, conceived of in very different terms. Courageous and deeply compelling, *Defining Neighbors* is a landmark book that fundamentally recasts our understanding of the modern Jewish-Arab encounter and of the Middle East conflict today.

Wealth And Poverty Of Nations-David S. Landes 2015-04-20 The history of nations is a history of haves and have-nots, and as we approach the millennium, the gap between rich and poor countries is widening. In this engrossing and important new work, eminent historian David Landes explores the complex, fascinating and often startling causes of the wealth and poverty of nations. The answers are found not only in the large forces at work in economies: geography, religion, the broad swings of politics, but also in the small surprising details. In Europe, the invention of spectacles doubled the working life of skilled craftsmen, and played a prominent role in the creation of articulated machines, and in China, the failure to adopt the clock fundamentally hindered economic development. The relief of poverty is vital to the survival of us all. As David Landes brilliantly shows, the key to future success lies in understanding the lessons the past has to teach us - lessons uniquely imparted in this groundbreaking and vital book which exemplifies narrative history at its best.
